

Results of SurveyUSA Election Poll #13300

Geography: Connecticut
 Data Collected: 02/02/2008 - 02/03/2008
 Release Date: 02/04/2008

Sponsors:
 WABC-TV (New York), WTNH-TV (Hartford-New Haven)

Jump Ball in CT Democratic Primary: Either Clinton or Obama May Emerge -- 24 hours till the votes are counted in the Connecticut Democratic Primary, Hillary Clinton and Barack Obama remain tied, as they were in SurveyUSA's most recent tracking poll released 72 hours ago, according to SurveyUSA research conducted exclusively for WTNH-TV Hartford and WABC-TV New York City. At the wire, it's Obama 48%, Clinton 46%, within the survey's 4 percentage point margin of sampling error. The Gender Gap is narrowing: Clinton's lead among women is smaller, Obama's lead among men is smaller, than 3 days ago. The Age Gap is narrowing: Obama's lead among younger voters is smaller; Clinton's lead among older voters has been erased.

Filtering: 1,900 state of Connecticut adults were interviewed 02/02/03 and 02/03/08. Interviews completed before Super Bowl kickoff at 6:30 pm ET 02/03/08. Of the adults, 1658 were registered to vote. Of them, 635 were determined by SurveyUSA to be likely to vote in the 02/05/08 Primary.

1 If the Democratic Primary for President of the United States were today, would you vote for...(names rotated) Hillary Clinton? Barack Obama? Or some other Democrat?

Statement of Methodology: The following statement conforms to the principles of disclosure of the National Council on Public Polls:How this poll was conducted: This SurveyUSA poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. Within the report, you will find: the geography that was surveyed; the date(s) interviews were conducted and the news organization(s) that paid for the research. The number of respondents who answered each question and the margin of sampling error for each question are provided. Where necessary, responses were weighted according to age, gender, ethnic origin, geographical area and number of adults and number of voice telephone lines in the household, so that the sample would reflect the actual demographic proportions in the population, using most recent U.S.Census estimates. In theory, with the stated sample size, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than theoretical calculations of sampling error. These include refusals to be interviewed, question wording and question order, weighting by demographic control data and the manner in which respondents are filtered (such as, determining who is a likely voter). It is difficult to quantify the errors that may result from these factors. Fieldwork for this survey was done by SurveyUSA of Verona, NJ.
