WBZ-TV (Boston)

Geography: Massachusetts RBS
 Data Collected: 01/22/2008 - 01/23/2008
 Release Date: 01/24/2008

Clinton Runs Away with Massachusetts; Obama and Edwards Way Far Back: In a Democratic Primary in Massachusetts today, 01/24/08, 12 days to the vote, Hillary Clinton advances to a commanding 37-point lead over Barack Obama and 48-point lead over John Edwards, according to this latest SurveyUSA tracking poll conducted exclusively for WBZ-TV Boston. Clinton leads by 23 among men, by 46 among women.

Filtering / Timing: 1,300 registered voters were interviewed by SurveyUSA 01/22/08 and 01/23/08 using registration based sampling. Of them, 586 were determined by SurveyUSA to be likely to vote in the 02/05/08 Massachusetts Democratic Primary. All interviews were conducted after the 01/21/08 Democratic candidate debate in Myrtle Beach. Results of the South Carolina Democratic Primary on 01/26/08 and the Florida Democratic Primary on 01/29/08 may influence what happens in Massachusetts and other states that vote on 02/05/08. 41% of likely voters say they may yet change their mind.

1 If the Democratic Primary for President of the United States were today, would you vote for...(names rotated) Hillary Clinton? John Edwards? Barack Obama? Or some other Democrat?

Statement of Methodology: The following statement conforms to the principles of disclosure of the National Council on Public Polls: How this poll was conducted: This SurveyUSA poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. Within the report, you will find: the geography that was surveyed; the date(s) interviews were conducted and the news organization(s) that paid for the research. The number of respondents who answered each question and the margin of sampling error for each question are provided. Where necessary, responses were weighted according to age, gender, ethnic origin, geographical area and number of adults and number of voice telephone lines in the household, so that the sample would reflect the actual demographic proportions in the population, using most recent U.S. Census estimates. In theory, with the stated sample size, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than theoretical calculations of sampling error. These include refusals to be interviewed, question wording and question order, weighting by demographic control data and the manner in which respondents are filtered (such as, determining who is a likely voter). It is difficult to quantify the errors that may result from these factors. Fieldwork for this survey was done by SurveyUSA of Verona, NJ.
