OKLAHOMA DEMOCRATIC PRIMARY -- Clinton 20 Points Atop Edwards, Obama in 3rd: In a Democratic Primary in Oklahoma today, 01/14/08, three weeks to the vote, Hillary Clinton is 1st at 45%, John Edwards is 2nd at 25% and Barack Obama finishes 3rd at 19%, according to a SurveyUSA poll conducted exclusively for KFOR-TV Oklahoma City. Men and women see the contest in stark contrast. Among men, Edwards leads Clinton by 6 and leads Obama by 12. Among women, Clinton leads the two men by 40 points. Edwards also leads among Conservatives. 37% of Democrats say they might change their mind between now and the 02/05/08 Primary. Among the rest, who say their mind is made-up, Clinton polls at 53%.

Filtering: 2,000 state of Oklahoma adults were interviewed by SurveyUSA 01/11/08 through 01/13/08. Of them, 1,714 were registered to vote. Of them, 650 were determined by SurveyUSA to be likely to vote in the 02/05/08 Democratic Primary. Results from Nevada on 01/19/08, South Carolina on 01/26/08, Florida on 01/29/08 can and will color results of Oklahoma and the other states that vote on so-called "Super Tuesday," 02/05/08. Expect buffeting.

1 If the Democratic Primary for President of the United States were today, would you vote for...(names rotated) Hillary Clinton? John Edwards? Barack Obama? Or some other Democrat?

Statement of Methodology: The following statement conforms to the principles of disclosure of the National Council on Public Polls: How this poll was conducted: This SurveyUSA poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. Within the report, you will find: the geography that was surveyed; the date(s) interviews were conducted and the news organization(s) that paid for the research. The number of respondents who answered each question and the margin of sampling error for each question are provided. Where necessary, responses were weighted according to age, gender, ethnic origin, geographical area and number of adults and number of voice telephone lines in the household, so that the sample would reflect the actual demographic proportions in the population, using most recent U.S. Census estimates. In theory, with the stated sample size, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than theoretical calculations of sampling error. These include refusals to be interviewed, question wording and question order, weighting by demographic control data and the manner in which respondents are filtered (such as, determining who is a likely voter). It is difficult to quantify the errors that may result from these factors. Fieldwork for this survey was done by SurveyUSA of Verona, NJ.
