**Clinton Still In Command in Oklahoma Democratic Primary:** In a Democratic Primary in Oklahoma today, 01/28/08, 8 days to the vote, Hillary Clinton holds a 17-point lead over John Edwards, according to this latest SurveyUSA tracking poll conducted exclusively for KFOR-TV in Oklahoma City. Today, it's Clinton 44%, Edwards 27%, and Barack Obama 19%. Results are virtually unchanged from those of an identical SurveyUSA poll conducted two weeks ago. Clinton leads by 39 points among women; Edwards leads by 7 points among men -- a 46 point gender gap. By more than 2:1, Oklahoma likely Democratic primary voters say the economy is the issue the the next president should focus on ahead of all overs; among the voters choosing the economy as the most important issue, Clinton leads Edwards by 22. Among those who say Iraq is the most important issue, Clinton leads by 15.

**Filtering:** 2,000 state of Oklahoma adults were interviewed by SurveyUSA 01/27/08, after results of the South Carolina Democratic Primary were known. Of them, 1,752 were registered to vote. Of them, 714 were determined by SurveyUSA to be likely to vote in the Republican Primary on 02/05/08. Results from Florida on 01/29/08 can and will color what happens in Oklahoma and the other states voting on February 5. Expect further buffeting in future SurveyUSA tracking polls.

**1** If the Democratic Primary for President of the United States were today, would you vote for...(names rotated) Hillary Clinton? John Edwards? Barack Obama? Or some other Democrat?

Release Date: 01/28/2008

**Statement of Methodology:** The following statement conforms to the principles of disclosure of the National Council on Public Polls: How this poll was conducted: This SurveyUSA poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. Within the report, you will find: the geography that was surveyed; the date(s) interviews were conducted and the news organization(s) that paid for the research. The number of respondents who answered each question and the margin of sampling error for each question are provided. Where necessary, responses were weighted according to age, gender, ethnic origin, geographical area and number of adults and number of voice telephone lines in the household, so that the sample would reflect the actual demographic proportions in the population, using most recent U.S. Census estimates. In theory, with the stated sample size, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than theoretical calculations of sampling error. These include refusals to be interviewed, question wording and question order, weighting by demographic control data and the manner in which respondents are filtered (such as, determining who is a likely voter). It is difficult to quantify the errors that may result from these factors. Fieldwork for this survey was done by SurveyUSA of Verona, NJ.
